

Chief Client Feedback.

These images give me an error. Is it possible to get a notification on the reason for the error? With some images, I got a message that the coin cell couldn't be located. That is great; I like that. But it would be nice if I knew why this picture failed to get a contour.

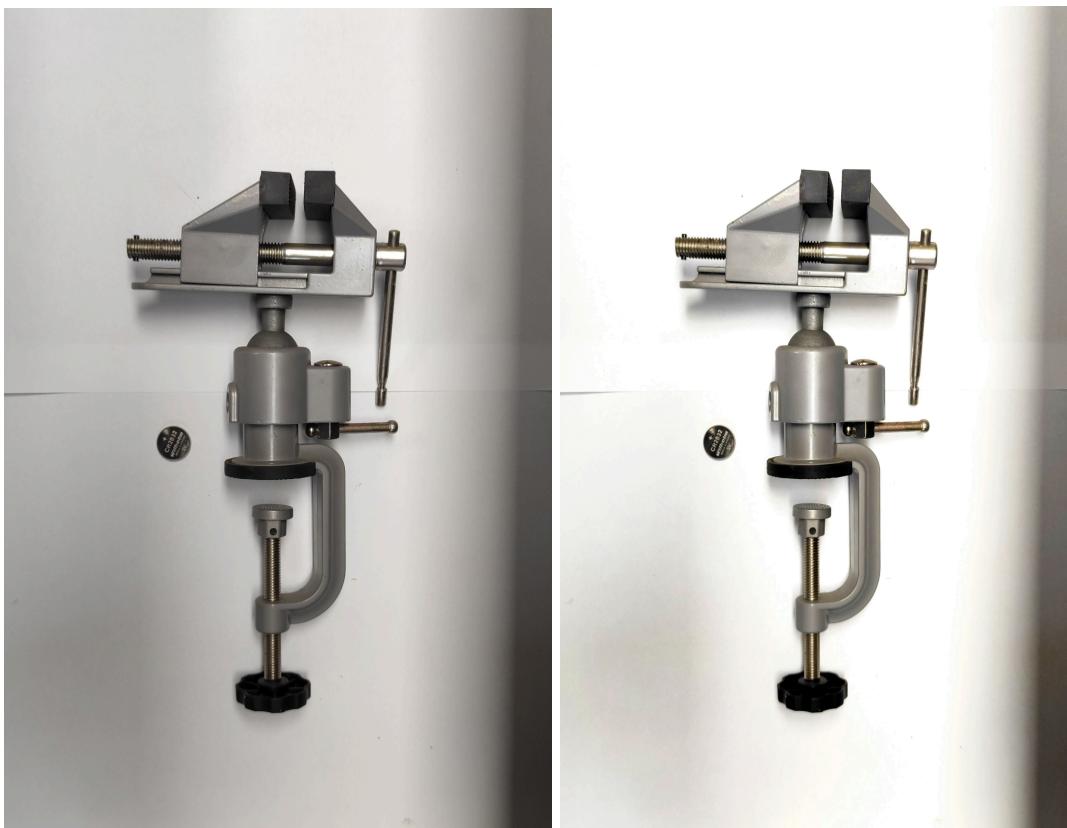

Please see the attached images.

2. This original image gives me the message "coin can't be located." But if I adjust the contrast of the images, it works fine. Isn't this something the software can figure out.

Please see the attached:

PLEASE CHECK THIS AMND IF YOU HAVE ANY QUESTION LET ME KNOW.
